Basic Press Brake Operator Fundamentals

FUNDAMENTALS

This "Basic Press Brake Operator Fundamentals" program reviews basic procedures which everyone working on or around a press brake should follow. The program is designed to help the operator understand the basic fundamentals prior to operating the press brake. This should result in safer, more productive workplace.

TRAINING

Basic fundamentals of operation should be explained to an employee before that individual is assigned to operate a machine. Using this videocassette program will ensure that all your operators are presented with the same basic information. Leaving this task to an experienced employee places unreasonable burden on their time. Too often, important information is not communicated properly if left to chance.

This program can supplement more detailed training relating to your specific machine and operation. Additional programs are available from CINCINNATI[®]

CONTENTS

This "Basic Press Brake Operator Fundamentals" program is contained on a 30 minute video. The operator is presented with a progression of framed information which will step him/her through six main sections which make up the program. These include an Introduction, General Rules, Setup Die Selection, Setup Adjusting and Control Selection, Press Brake Operation and audience participation materials are included. The program requires approximately 30 minutes for presentation.

Each set contains:

- One video
- Program instructions
- 12 trainee response booklets
- Shipping carton for use as a convenient storage packager on a shelf.

To order, please fax your purchase order to Cincinnati Incorporated; 513-367-7399, part # 426952 (Basic Press Brake Operator Fundamentals) for the value of \$125.00 EA. The training program will be shipped postage paid to your location within two weeks.
